Make a Square Crochet Dishcloth

A measured cotton square built from twenty-four single crochet stitches per row

A square made by measuring, not guessing

The previous lessons taught a chain, a single-crochet stitch and how to count a written row. This project connects them into one everyday square of crocheted cotton. Start with twenty-five chain stitches, make twenty-four US single crochets across Row 1, and keep twenty-four stitches in each subsequent row. Stop only when the measured height is approximately equal to the measured width. The number of rows needed depends on the yarn, hook and your own tension; twenty-four rows are NOT automatically a square.

An original recipe with a clear boundary

This is a small unadorned single-crochet cloth worked flat, without a hanging loop or stitched-on parts. Its purpose is to practise a steady edge while producing a useful shape if the selected yarn and home laundering practices make it appropriate. The printed chart is a stitch-count and measurement aid, not a guarantee of a finished centimetre size. The publisher has not physically crocheted this cloth or tested its cleaning performance.

Choose a suitable washable yarn

For a cloth intended to be washed, choose a smooth 100 percent cotton yarn with a care label permitting the cleaning method you actually use. Match an accessible hook to the label; a hook around 4 to 5 mm can be a starting point for many medium cotton yarns but is not a guaranteed gauge. Have two removable markers, a ruler, scissors, a blunt yarn needle and a notebook. Avoid fuzzy yarn, loose novelty decorations, unknown chemical treatments and fibres that cannot be cleaned and dried appropriately.

Use the US stitch language

Here ch means chain and sc means US single crochet. The US sc is made by inserting the hook, pulling up a loop (two loops on the hook), then yarn over and drawing through both loops. In this particular pattern, the one chain made before turning raises the working loop only: it does NOT count as a sc and must not receive an extra stitch. A top V made of two strands represents one sc, not two separate stitches.

Keep food and household safety realistic

This original educational pattern has no food-contact, absorbency, dye migration, washing, hygiene, heat or durability certification. Use a dry, cleaned cloth according to your yarn's care instructions; if the yarn sheds, bleeds, smells musty or cannot be thoroughly dried, discontinue kitchen use. It is not a hot pad, oven mitt, protective trivet, sterile wipe or a substitute for sanitising. Keep tools and loose yarn away from children and pets, and stop if repetitive motion hurts.

Plan the practice

Read these dimensions and conventions before touching yarn.

Calculate the first row

Make a slip knot and 25 actual foundation chain stitches. The loop on the hook and the slip knot do not count. Skip the first chain nearest the hook, insert into the second chain and work one sc into every remaining chain. That leaves 25 - 1 = 24 real sc in Row 1. A marker in the first and last new stitch helps show where the next row should begin and end. PATTERN 1 illustrates those 25 chain positions and the one skipped position.

Use one consistent repeat rule

At the end of Row 1, ch 1 and turn. Insert in the first real sc of the previous row, under both strands of its top V; work exactly one sc into each of the 24 positions across. Work the final real edge stitch, even if it is partly hidden. Repeat this same row for as many rows as needed to reach a square. Never turn by inserting into the turning ch-1 as though it were a new sc in this pattern.

Square is a comparison of two measurements

Lay the work flat without stretching or pulling its corners. Measure the width across the crocheted fabric, excluding loose tails, and measure the height from foundation edge to the most recent full row. Stop when width and height are approximately equal. A small variation is acceptable for a practical cloth; the original chart shows where to put the ruler, not a fixed width. This procedure is necessary because row height and stitch width usually differ.

A record without imaginary gauge numbers

RECORD 1 provides a row-count log: Row 1=24, Row 2=24, and a continuation grid for later rows. RECORD 2 provides blank boxes for actual width, actual height and your stopping decision. It is acceptable to write 'not measured yet' in a box. Only the maker's measured piece can supply the dimensions. No finished size or square-shape tolerance has been physically demonstrated by the publisher.

Read the printable schematics correctly

PATTERN 1 is a symbolic foundation-chain diagram: one skipped position and 24 sc positions. PATTERN 2 is an original sample row chart and two crossed ruler directions showing width and height. The chart includes only several sample rows because a true square may need more or fewer rows than the example; do not mistake the drawing for an order to stop at row six. Each of the two pattern pages contains two mathematically drawn 50 mm scale bars. Print at Actual Size or 100 percent and verify the bars with your own ruler before using any measurements.

Choose a simple, safe finish

When width and height are approximately equal, finish after a complete row. Cut a yarn tail of comfortable length, pull it completely through the live loop, then weave it back through several wrong-side stitches with a blunt needle. Avoid tying a hard bulky knot in the surface. If wet cleaning is appropriate, follow the actual yarn label, dry the item thoroughly and keep it out of flames and off heated cookware. No test of shrinkage or wash performance has been conducted.

Practice - steps 1 to 8

Fourteen original steps / count only actual completed crochet stitches.

1. Prepare cotton and record your plan Read the yarn care label and choose an appropriate hook. Clear a dry, well-lit surface and place scissors in a safe position. On RECORD 1 write the yarn, hook size and target of twenty-four completed sc per row. The work is intended for adult practice, not for heat protection. Check that no child or pet can reach a loose strand.

2. Make twenty-five foundation chains With a slip knot on the hook, make 25 complete ch stitches by yarn over and pull through the live loop. Count the V shapes of the chain itself, excluding both the knot and the live loop. Keep the chain relaxed rather than pulling it taut to achieve a target length.

3. Find the second chain from your hook Locate the chain V immediately below the live hook loop and skip that nearest chain. Insert into the next V, which is the second chain from the hook. The skipped chain gives turning height. PATTERN 1 labels that skipped first position separately from the 24 eligible positions.

4. Complete the first single crochet With the hook inserted, yarn over and draw up one loop, leaving two loops on the hook. Yarn over again and draw through both loops together. One loop remains on the hook; you have just made one US sc. Avoid counting the two temporary hook loops as two completed stitches.

5. Finish Row 1 at exactly twenty-four Work one sc in each of the other 23 foundation-chain positions. Include the chain at the far end and do not work into the beginning knot. Count the 24 top V shapes along the row; place removable markers in the first and last new sc if you find the edges hard to see. RECORD 1: Row 1 actual count should be 24.

6. Chain one and turn Make one ch for the turn, then rotate the fabric with the live loop still on the hook. This turning ch does not count as a sc for this original recipe. Find the first actual top V immediately beside it; a turning chain is not a second stitch and does not get a separate sc.

7. Work Row 2 without adding an edge Insert under both top-V strands of the first real sc of Row 1, work a single crochet, then continue one sc in each of the remaining 23 real stitch tops. Move each edge marker to the new row after using it. The last sc is the last real top V, not a side bar or the turning chain. Record 24 on Row 2.

8. Check the two-row edges Set the hook down safely and count Row 2 again. If there are 23 stitches, inspect the far edge; if there are 25, inspect whether the turning chain or first stitch was worked twice. Undo the latest row if needed rather than inventing an increase to balance an error. The practice should remain 24 sc across.

Practice - steps 9 to 14

Finish the original project and record the measured result.

9. Continue in single-crochet rows Work ch 1, turn and one sc in each real stitch across for Row 3. Repeat the same instruction for every later row; no fixed ending row is prescribed. Maintain a tally of the row number and actual stitch count on RECORD 1. Use edge markers whenever a side V becomes hard to identify.

10. Measure the width without stretching Lay the cotton swatch flat on a table without pulling it taut. With a ruler, measure from the left edge of the body to the right edge across a representative horizontal row, leaving out any yarn tails. Record the actual width in millimetres on RECORD 2. Do not round the measurement into a size claimed by the publisher.

11. Compare height with width Measure from the foundation edge to the top of the latest complete row. Enter the actual height beside the width. If the height is clearly shorter, work another complete 24-sc row and measure again; if the height is near the width, the square objective has been met. The row count needed is particular to your yarn and tension.

12. Correct a changing stitch count If a row is short, inspect both real border top Vs before proceeding. If it grows, look for an extra stitch in the ch-1 turning chain. Unravel back to the last correct row and work across again with both edges marked. Do not pull the fabric into a square or add stitches haphazardly.

13. Finish after the last full row At the selected square-ish shape, stop after completing all 24 sc in the current row. Cut a manageable tail and pull it fully through the hook loop to secure. Thread the tail through the wrong side of several existing sc with a blunt yarn needle. Do not cinch the cloth edges or introduce an unplanned seam.

14. Clean, dry and record honest limits Follow the care label if you clean the finished cloth, let it dry completely and replace it if it sheds, frays or smells damp. Enter final actual width, height, row count and whether it appears square in RECORD 2. This is an untested home craft project; no sanitation, heat protection, colourfastness or laundering claims are made.

Fix, care and preserve

One edge keeps widening. The turning ch-1 may have been counted as a sc or the first real stitch worked twice. Keep exactly one sc in each of 24 real stitch tops. Correct the first inconsistent row, not a later row, before making the square taller.

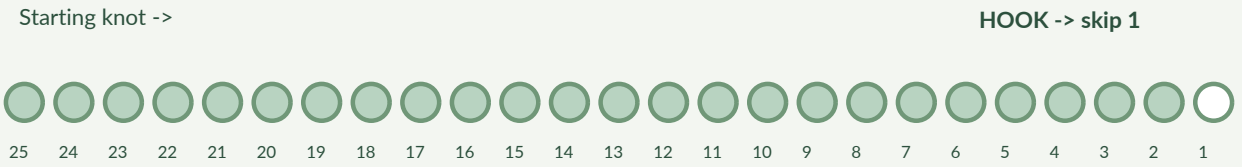
The edges are even but the cloth is not square. Equal stitch counts establish a rectangle, not necessarily a square. Width is governed chiefly by stitch gauge; height by row gauge. Add complete rows when height is too short, stop earlier in the next attempt if it grows too tall, and measure the actual piece rather than trusting a guessed row count.

The cotton dries slowly or changes shape. Check the selected yarn's actual washing instructions and drying requirements. Dry completely and discontinue kitchen use if there is persistent moisture, mildew odour, bleeding colour or loose fibres. The publisher did not test absorbency or washing durability.

Make a Square Crochet Dishcloth

Original vector teaching drawing / symbolic stitch sizes, not a finished-yarn gauge

CH 25 / SKIP NEAREST CH / 24 REAL SC



24 filled dots = 24 insertion positions for Row 1

SC ACTION 1

Insert under the two top loops / yarn over, pull up one loop

SC ACTION 2

Two temporary loops on hook / yarn over, draw through both

TURN THE WORK

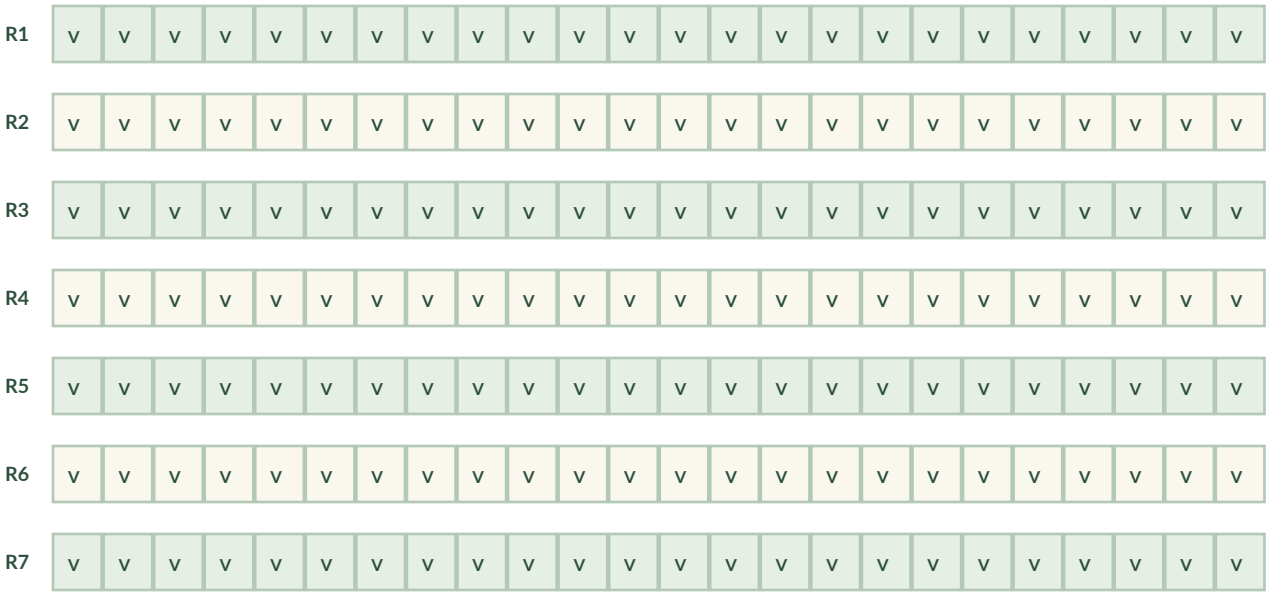
Ch 1 and turn. Turning ch is not a completed sc.

PRINT AT 100% / ACTUAL SIZE; measure both original 50 mm bars.

Make a Square Crochet Dishcloth

Original vector teaching drawing / symbolic stitch sizes, not a finished-yarn gauge

SYMBOLIC ROW COUNT / 24 STITCH COLUMNS



WIDTH = horizontal body measurement; HEIGHT = vertical body measurement

Use a ruler on the crocheted cloth, not on the schematic squares.

Seven sample rows only. Continue rows of 24 sc until HEIGHT is near WIDTH.

50 mm BAR A

50 mm BAR B

PRINT AT 100% / ACTUAL SIZE; measure both original 50 mm bars.
